

- what do I want to learn or understand better?
  - I installed Android Studio and got it working somewhat. But still haven't been able to produce a basic piece of code to run. Since a lot of team members express the same issue, we will do this together when we have a coding meet-up.
- how can I help someone else, or the entire team, to learn something new?
  - Now I know a bit more about SCRUM and also have better grasp on the purpose of the course. The way we work is much more important than the final product. Sometimes in discussions the focus seems to shift onto the technical part before much of the SCRUM process has been addressed. I will try to steer members in the correct direction to ensure strict process adherence.
- what is my contribution towards the team's application of Scrum?
  - I continue to have a positive attitude in meetings. Also taking the role as scrum master. I don't know currently how I could improve on this point.
- what is my contribution towards the team's deliveries?
  - I have not been able to contribute in any meaningful way since we have not done any coding or exercises.
