

Summary of Individual Reflections

Rasmus Claeesen

what do i want to learn or understand better?

During this course my focus has been on applying scrum in our project, as well as getting some experience with the development of android applications. Overall I feel like this was achieved during the course. With much time spent on reflecting about what went how and why, I feel like this was a good experience in models for project management.

During the course I also worked some with developing different features for the android app, which for me was a new experience, and got some experience with local databases and graph representation.

how can I help someone else, or the entire team, to learn something new?

I think we've learned a lot as a team during this course. Our group consisted of 6 students of which none had spoken to one another before this course which created some things to reflect about. I tried to help out with our application of scrum in my best ability thus being a part of the team learning something new.

what is my contribution towards the team's application of Scrum?

I generally tried to contribute to our application of scrum during our meetings, as we were working with applying scrum. I also spent some time trying to create documents to help our scrum structure. Overall I would've liked to contribute more with applying the scrum model.

what is my contribution towards the team's deliveries?

I spent some time with developing features to our deliveries and think that the result I achieved was decent. So in terms of code I contributed a lot. I also tried to help my team members in different ways to help them contribute as well. Overall I think that I contributed much to our deliveries but would've liked to spent some more time on finalizing features.
