

WEEK 1 REFLECTION - ERIC

What do I want to learn or understand better?

I have a limited understanding of both SCRUM and developing for android. Since all lectures this week has been focused on SCRUM, with the actual technical details of the project coming next week, I'll put some effort in reading the suggested material on the course website.

How can I help someone else, or the entire team, to learn something new?

I am unsure about this since we've not really talked about how we want to structure our project and what we need to focus on.

What is my contribution towards the team's application of Scrum?

None except discussing how often I think we should meet in the coming weeks. If we have a solid base of 3 meetings a week, we'll have ample time to discuss how we will go about structuring our work environment.

What is my contribution towards the team's deliveries?

More or less none at this point. I have some ideas for an app, but the only one of those ideas I feel could work would be an app that focuses on the economic part of driving, like fuel costs and fuel efficiency. I will have to discuss my ideas with the team and see what will come of it.
