

- what do I want to learn or understand better?
 - I got help from Rasmus and managed to contribute to the codebase and merge it into our repository.
The scope of code was however very limited, because I am not very familiar with Java and he held my hand along most of the coding.
Furthermore, I will not try to improve at coding in Java at this stage, but rather try to contribute what I can with my current ability.
- how can I help someone else, or the entire team, to learn something new?
 - This late in the project it is less valuable to focus on learning something new.
- what is my contribution towards the team's application of Scrum?
 - We are lacking when it comes to planning the sprints. This becomes apparent when we do the sprint review and realize that we haven't even planned to do one of the things that we said in the previous sprint review. However, this may also be a consequence of spending much of the sprint planning doing other things. Such as, creating, modifying and estimating user stories (This has taken a lot of time for us).
- what is my contribution towards the team's deliveries?
 - I have contributed with a filtering function that handles raw input data and averages it out and sends it to parts of the program that want the data in this format.
