

Individual Reflection

Rasmus Claesen

1 The very first reflection

what do I want to learn or understand better?

This first week I felt as there was a lot of new things being introduced, namely agile & scrum. Obviously, the goal for this first week for me is going to be related to these topics, and the goal would be to gain a greater understanding of the mechanics of this type of setup. To achieve this, I should attend the exercises and try to read some literature.

how can I help someone else, or the entire team, to learn something new?

Currently I feel the focus isn't on learning something *new* but rather getting to know the group, of which I do not know anyone yet. Hopefully we'll learn a lot, not only about agile, scrum and android.

what is my contribution towards the team's application of Scrum?

At this moment I do not know much about scrum, but by next week perhaps I know a bit more about this and can start to formulate the ways I'd like to contribute. For now participating in the exercises will do.

what is my contribution towards the team's deliveries?

A simple thing like setting slack for communications with the team. By next week perhaps I have a greater understanding and have the ability to make contributions towards formulating our own scrum process. This seems like it just needs time right now.

2 The second reflection

what do I want to learn or understand better?

I have not yet had the time to truly dig in to the depths of agile & scrum, but I now at least have a good understanding of what we're supposed to work towards. Moving forward, I need to not only keep learning about scrum but also about android development.

how can I help someone else, or the entire team, to learn something new?

We do have mixed experiences which is nice and I feel like I've made some contributions about different solutions to support our teamwork and effectiveness. Further, I hope to be able to contribute on git & java for when we get down to writing code.

what is my contribution towards the team's application of Scrum?

Nothing much, as I feel like we have not yet had the chance to apply scrum. Going forward, just trying to keep our ways in line with scrum and supporting the scrum master to ease into the role should do.

what is my contribution towards the team's deliveries?

I try to take notes on meeting to clarify and help the group remember decisions being made, help out with setting up our choice of systems as well as being involved in getting the group moving forward. I'd like to get started on Android Studios and see how we'll work it out with that.

3 The third reflection

what do I want to learn or understand better?

Currently we've had the time to work with agile which has been interesting, as well some trials with android studios. Further understanding of the sprint process is the goal the coming week.

how can I help someone else, or the entire team, to learn something new?

Like last week, it's currently minor things allowing us to go forward hopefully. More java is still sort of a goal here.

what is my contribution towards the team's application of Scrum?

Minor things, as above. The goal is to contribute to a good sprint planning this week.

what is my contribution towards the team's deliveries?

Had the opportunity to help out some with android studios. Next week I hope to help deliver by completing a sprint.

4 The fourth reflection

what do I want to learn or understand better?

This week we had our first sprint planning which was a new experience. I was not able to spend any time exploring android studios this week but mainly I want to keep working towards completing a decent sprint.

how can I help someone else, or the entire team, to learn something new?

This was a slow week, I did however have to opportunity to help someone else out with debugging their android studios and androidCAR setup. More of last week goals ahead.

what is my contribution towards the team's application of Scrum?

Fairly low, we had a mixed experience with our sprint and my contribution was on par. I hope to be able to contribute more towards this next week.

what is my contribution towards the team's deliveries?

This week it has been little, but still some support on our sprint. Like above, more of this the next week.

5 The fifth reflection

what do I want to learn or understand better?

This week our sprint became better and to continue and improve this is necessary. I've started to explore the android environment and that is the main goal to proceed with.

how can I help someone else, or the entire team, to learn something new?

This week this was most prominent during meetings where we had some good discussions. I feel like that is a good way for us as a group and individuals to keep improving and is therefore the goal going forward.

what is my contribution towards the team's application of Scrum?

This week I was more focused on making sure the sprint planning went well and we made improvements over last week. Further I'll just try to make sure we keep the improvements going forward as well as trying to add the final moments.

what is my contribution towards the team's deliveries?

This week's contribution has only been in a more formal way like helping the structure of our meetings and documenting our progress as well as trying to make improvements in our way of work. Next week I will deliver a lot more in the form of completing tasks and writing code.

6 The sixth reflection

what do I want to learn or understand better?

This week has been slow in terms of scrum but productive in terms of coding. further I hope to see and learn from what results scrum produces for us.

how can I help someone else, or the entire team, to learn something new?

Currently A is the opposite of what would have been the 'b' of last week. This week at was just android stuff. Going forward, retrying the goal of last week.

what is my contribution towards the team's application of Scrum?

My contribution to scrum this started well but we did not have a good week in terms of scrum and therefore my contribution was not what I would've liked it to be. Going forward, like most of the answers this week is simply trying to learn from this iteration and improve next week.

what is my contribution towards the team's deliveries?

This week I contributed a lot in terms of completing tasks and delivering running code as well as good documentation. Next week I hope to deliver something similar code-wise but also something greater scrum-wise

7 The seventh reflection

what do I want to learn or understand better?

For this final week we have worked a lot with improving our scrum and it's been yielding good results in terms of productivity and from the I think much has been learned.

how can I help someone else, or the entire team, to learn something new?

We as team spent some time and effort to learn about how we'd do our bussiness in a final week of scrum without really changing our ways.

what is my contribution towards the team's application of Scrum?

I've been involved in making sure we do a final sprint planning in a improved way and that we can focus on the tasks remaining for the app to be minimum shippable / viable product.

what is my contribution towards the team's deliveries?

This final week my contribution has been mixed by the ensuring the scrum process as well as much time spent on finishing tasks. A good week.
