

Individual reflection, week 5 - Carl Lundborg

This week I finished my task for the sprint. The task was to implement an MVC pattern for the project. After some research and coding I realized I had to change the pattern in order to work in an efficient way with Android. What I like to learn better for next week is to break down the task more, since this task was very time consuming. To achieve this I will have to analyze each task more and see if it can be broken down into more manageable parts.

I have showed the rest of the team my pattern implementation and how to merge this with their work. It became clear that my implementation made it very easy for them to merge their work and make the design modular. Since I focus a lot on the code structure I will continue to learn them about my implementations by continuing in the same fashion as I have done now.

My contribution to scrum has been the same as last week. We have now a lot of new tasks, so the goal for me would be to analyze these and maybe break these down into more tasks. This will be done by researching the work that each task require and analyze them more.

My contribution toward's the team deliveries is to try to at least manage one task per week, and to meet the KPI criteria that we have agreed on. I will also try to continue to finish work that provide costumer value in that sense that it there is always something new that can be shown. This goal will be reached by continuously follow how our workflow regarding scrum has been set, and to finish the tasks that I have taken on.
