

Individual Reflection

Rasmus Claesen

1 The very first reflection

what do I want to learn or understand better?

This first week I felt as there was a lot of new things being introduced, namely agile & scrum. Obviously, the goal for this first week for me is going to be related to these topics, and the goal would be to gain a greater understanding of the mechanics of this type of setup. To achieve this, I should attend the exercises and try to read some literature.

how can I help someone else, or the entire team, to learn something new?

Currently I feel the focus isn't on learning something *new* but rather getting to know the group, of which I do not know anyone yet. Hopefully we'll learn a lot, not only about agile, scrum and android.

what is my contribution towards the team's application of Scrum?

At this moment I do not know much about scrum, but by next week perhaps I know a bit more about this and can start to formulate the ways I'd like to contribute. For now participating in the exercises will do.

what is my contribution towards the team's deliveries?

A simple thing like setting slack for communications with the team. By next week perhaps I have a greater understanding and have the ability to make contributions towards formulating our own scrum process. This seems like it just needs time right now.

2 The second reflection

what do I want to learn or understand better?

I have not yet had the time to truly dig in to the depths of agile & scrum, but I now at least have a good understanding of what we're supposed to work towards. Moving forward, I need to not only keep learning about scrum but also about Android development.

how can I help someone else, or the entire team, to learn something new?

We do have mixed experiences which is nice and I feel like I've made some contributions about different solutions to support our teamwork and effectiveness. Further, I hope to be able to contribute on git & java for when we get down to writing code.

what is my contribution towards the team's application of Scrum?

Nothing much, as I feel like we have not yet had the chance to apply scrum. Going forward, just trying to keep our ways in line with scrum and supporting the scrum master to ease into the role should do.

what is my contribution towards the team's deliveries?

I try to take notes on meeting to clarify and help the group remember decisions being made, help out with setting up our choice of systems as well as being involved in getting the group moving forward. I'd like to get started on Android Studios and see how we'll work it out with that.

3 The third reflection

what do I want to learn or understand better?

how can I help someone else, or the entire team, to learn something new?

what is my contribution towards the team's application of Scrum?

what is my contribution towards the team's deliveries?
