WEEK 4 REFLECTION - ERIC

What do I want to learn or understand better?

Having learned more about the standard Android API, some about the CAR API and PySim, which is used to simulate car events, I now want to turn my focus to external APIs like Google's maps SDK. Luckily, Google usually have pretty good documentation, so looking through that should be a good first step.

How can I help someone else, or the entire team, to learn something new?

Should the need for way more python simulations arise, I could be of help to the person/s writing those if I'm working on something else, since I've dabbled in that code a bit already.

What is my contribution towards the team's application of Scrum?

I've suggested a few ways to calculate the team's KPIs, and have also made suggestions for user stories and how they can be broken down into concrete tasks. If my suggestions are of relevance remains to be seen, however.

What is my contribution towards the team's deliveries?

I try to make sure that everything works as it should for everyone. This week I figured out why our applications kept crashing, and how to solve the issue. Fixing that really helped the team to get in gear. I've also written some code for the python simulations, and plan on expanding those based on needs of the team, which I'll ask about on monday next week.
