- what do I want to learn or understand better?
    - I want to understand how to get a project unstuck when it has stopped moving forward. I think it has to do with just following a process and not focusing on creating a product. The process is well-defined and can always be applied, whereas the product will never be the same for every new project I start.
- how can I help someone else, or the entire team, to learn something new?
    - This late in the project it is less valuable to focus on learning something new.
- what is my contribution towards the team's application of Scrum?
    - We are back in the same rut as before. Our sprint reviews as well as planning meetings devolve into technical discussions that will not die down when these kings of questions appear: "How much time will this take"?, "How can we do this better in the next sprint", "Is this part done?".
    When it is not clear how long a task will take, the meeting simply won't progress until the time runs out or it finally has been established.
- what is my contribution towards the team's deliveries?
    - The filtering class needed to have a standardized interface to work with other parts of the program. This was completed.
