WEEK 3 REFLECTION - ERIC

What do I want to learn or understand better?

Having looked into android development, I realised that while the basic OO-principles are there, the way you develop for the platform is somewhat different. Going forward, however, my main focus should be on getting an even better understanding of the car API. Easiest way to do that would be by getting to work on a concrete task I would say. It's easier to learn by doing.

How can I help someone else, or the entire team, to learn something new?

Everyone are now pretty up to speed on the basics of git, and we all have our emulators running correctly. Going forward, if we can find schedules that align, I think it might be a good idea to focus on pair programming to ease everyone into the actual development. I will suggest it next week and see if it is of interest.

What is my contribution towards the team's application of Scrum?

See above. Pair programming would allow tasks to become more manageable over a single sprint, potentially increasing productivity.

What is my contribution towards the team's deliveries?

We still haven't really delivered anything major yet. However, the coming week I'll focus on gaining some steam by discussing tasks with the group.
